Oshri Halevi

052-6063126 | oshrihalevi.l@gmail.com | GitHub | LinkedIn | Portfolio

Available for full-time junior position

Highly motivated and responsible individual with a strong interest in technology and software.
A quick learner with a structured and organized approach to work, demonstrating initiative, strong commitment, and the ability to work effectively both independently and as part of a team.

Education

2024-2026: **Holon Institute of Technology** (HIT), Bachelor's degree in Computer Science
2017-2019: **"Kanfey Ruach" College** (as part of the Israeli Air Force Technological Pre-Military Program), Practical Electrical Engineer, holder of a Master Electrician License, graduated with highest honors
2012-2017: **Amit Dvir High School**, full matriculation certificate with specialization in electrical studies

Employment

2022-2023: **Magnus Metal Ltd** (Start-up Company) **Machine Operator**
Operated and maintained production machines, including troubleshooting and ensuring continuous operation. Conducted routine experiments, monitored and documented processes, and analyzed data to support process improvement. Additionally, prepared 3D models for printing and executed end-to-end 3D printing operations as part of the production workflow

Projects

- **ShareMap** Full-stack web application for real-time location sharing, built with Java (Spring Boot) and HTML/CSS/JS using Leaflet
  Includes JWT-based authentication, group management, and invite-code joining.
  Displays user locations on an interactive map with sharing control and PostgreSQL storage.
- **Task Manager App** I developed an Android task management app in Kotlin, implementing MVVM architecture, a Room database for local data storage, and ViewModel for lifecycle-aware state management
- **Smart Parking System - IoT Project** Developed a smart parking system simulating a real-time parking lot using IoT technologies. Implemented parking sensors and an entry gate communicating via MQTT with a central data manager for monitoring, data storage, and real-time control through a GUI
- **Intelligent Robotic Arm** for Color-Based Sorting: Developed an autonomous robotic arm project integrating AI vision (Seeed Grove Vision AI), Arduino/ESP32 for embedded control, and a React web interface for manual operation and real-time system monitoring, successfully demonstrating low-cost, AI-driven object sorting
- **Coupon Manager** A full-stack web app for tracking and managing personal coupons and gift cards in one place. Users can add coupons, monitor expiration dates and remaining balances, and quickly find what's still usable before it expires. Built with a Supabase backend (PostgreSQL + Auth) and a frontend deployed on Vercel for fast, always-available access. Tech: React · Supabase · PostgreSQL · Vercel

Military Service

2019-2022: An electrician in the Air Force, certified in air conditioning systems, I served as the head of the maintenance and troubleshooting team, responsible for a team in routine and emergency situations. These tasks required meticulous attention to detail and the ability to execute under tight schedules

Courses & Skills

Courses: Data Structures, Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming, Software Engineering, Machine Learning, Cybersecurity

Skills: AI, Git, React, Python, Java, Kotlin, SQL, C, C++, JavaScript, HTML, Linux

Languages

Hebrew – Native language | English – Proficient
